What's new in v2 SKUs

Faster
configuration

SLA for all tiers

Private inbound
and outbound
network

Cheaper
production
instance with
standard v2

Q: Can I migrate from my existing API Management instance to a new v2 tier instance?

A: No. Currently you can't migrate an existing API Management instance (in the Consumption, Developer, Basic, Standard, or Premium tier) to a new v2 tier instance. Currently the v2 tiers are available for newly created service instances only.
